

CURRICULUM VITAE

Stephen Eric Asche

Contact Information

Stephen Eric Asche
Statistical Investigator and Manager,
Research Methodology Group
HealthPartners Institute
Mail Stop 23301A
3311 E Old Shakopee Road
PO Box 1524
Bloomington, MN 55425-1524
952-967-5018
Steve.E.Asche@healthpartners.com

Education & Training

University of Minnesota, Minneapolis, MN
School of Education
Quantitative Methods in Education
Master of Arts, Educational Psychology, 1992

University of Minnesota, Minneapolis, MN
Bachelor of Arts, Psychology, 1986

Professional Society Memberships

International Biometric Society, ENAR 2010-2019

Research Experience

HealthPartners Institute, Bloomington, MN
Statistical Investigator and Manager, Research Methodology
Group 2008-present
Senior Statistician Investigator 2015-present
Statistician Investigator 2011-2015
Biostatistician, 2003-2011

Minnesota Department of Human Services, St. Paul, MN
Performance Measurement & Quality Improvement
Health Care Research & Evaluation
Research Scientist 1997-2003

University of Minnesota, Minneapolis, MN
Psychology Department
Research Fellow, 1988-1997

Personnel Decision Research Institute, Minneapolis, MN
Survey Research Group
Research Analyst, 1986-1988

Journal Review Activities

Journal of Patient-Centered Research and Reviews (2019)
Journal of Palliative Medicine (2016, 2017, 2018)
Health Services Research (2015)
American Journal of Managed Care (2015)
Journal of Ambulatory Care Management (2010)
Journal of Substance Abuse Treatment (2002)

Journal Articles

1. Kharbanda EO, Asche SE, Dehmer SP, Sinaiko AR, Ekstrom HL, Trower N, O'Connor PJ. Impact of updated pediatric hypertension guidelines on progression from elevated blood pressure to hypertension in a community-based primary care population. *J Clinical Hypertension*. 2019;21:560-565.
2. Li B, Asche SE, Yang R, Yueh B, Fina M. Outcomes of adopting endoscopic tympanoplasty in an academic teaching hospital. *Annals Otology Rhinology Laryngology*. 2019 Feb.
3. Dehmer SP, Maciosek MV, Trower NK, Asche SE, Bergdall AR, Nyboer RA, O'Connor PJ, Pawloski PA, Sperl-Hillen JM, Green BB, Margolis KL. Economic Evaluation of the Home Blood Pressure Telemonitoring and Pharmacist Case Management to Control Hypertension (Hyperlink) Trial. *Jour Am Coll Clin Pharm*. 2018; 1:21-30.
4. Beran MS, Asche SE, Bergdall AR, Crabtree BF, Green BB, Groen SE, Klotzle KJ, Michels RD, Nyboer RA, O'Connor PJ, Pawloski PA, Rehrauer DJ, Sperl-Hillen JM, Trower NK, Margolis KL. Key components of success in a randomized trial of blood pressure telemonitoring with medication therapy management pharmacists. *J Am Pharm Assoc*. 2018 Nov-Dec;58(6):614-21
5. Margolis KM, Asche SE, Dehmer SP, Bergdall AR, Green BB, Sperl-Hillen J, Nyboer RA, Pawloski PA, Maciosek MV, Trower NK, O'Connor PJ. Long-term Outcomes of Home Blood Pressure Telemonitoring and Pharmacist Management on Blood Pressure Among Adults With Uncontrolled Hypertension: A Cluster-Randomized Trial. *JAMA Netw Open*. 2018 Sept;1(5):e18617.
6. Kharbanda EO, Asche SE, Sinaiko A, Ekstrom HL, Nordin JD, Sherwood NE, Fontaine P, Dehmer SP, Appana D, O'Connor PJ. Clinical decision support for recognition and management of hypertension: a randomized trial. *Pediatrics*. 2018 Feb;141(2):e20172954.
7. Kharbanda EO, Asche SE, Sinaiko AR, Nordin JD, Ekstrom HL, Fontaine PL, Dehmer SP, Sherwood NE, O'Connor PJ. Evaluation of an electronic clinical decision support tool for incident elevated BP in adolescents. *Acad Pediatr*. 2017 Jul 16 [Epub ahead of print].
8. Solberg LI, Asche SE, Butler J, Carrell D, Norton CK, Jarvik JG, Smith-Bindman R, Tillema JO, Whitebird RR, Werner AM, Ziegenfuss JY. Patient Centered Outcomes Measurement: Does it Require Information from Patients? *J Patient Cent Res Rev*. 2017;4:221-229.
9. Asche SE, O'Connor PJ, Dehmer SP, Green BB, Bergdall AR, Maciosek MV, Nyboer RA, Pawloski PA, Sperl-Hillen JM, Trower NK, Margolis KL. Patient characteristics associated with greater blood pressure control in a randomized trial of home blood pressure telemonitoring and pharmacist management. *J Am Soc Hypertens*. 2016;10(11): 873-880.
10. Pawloski PA, Asche SE, Trower NK, Bergdall AR, Dehmer SP, Maciosek MV, Nyboer RA, O'Connor PJ, Sperl-Hillen JM, Green BB, Margolis KL. A substudy evaluating treatment intensification on medication adherence among hypertensive patients receiving home blood pressure telemonitoring and pharmacist management. *Annals of Pharmacotherapy*. *J Clin Pharm Ther*. 2016;41:493-498.
11. Kharbanda EO, Nordin JD, Sinaiko AR, Ekstrom HL, Stultz JM, Sherwood NE, Fontaine PL, Asche SE, Dehmer SP, Amundson JH, Appana DX, Bergdall AR, Hayes MG, O'Connor PJ.

TeenBP: Development and Piloting of an EHR-Linked Clinical Decision Support System to Improve Recognition of Hypertension in Adolescents. EGEMS (Wash DC). 2015 Jul 9;3(2):1142.PMCID: PMC4537153.

Ongoing Research Support

Optimizing the Value of PROMs in Improving Care Delivery through Health Information Technology (Solberg)

Contract Number: R18HS025618

Source: AHRQ

Role on Project: Co-Investigator/Statistician

Dates: 09/01/2017-08/31/2022

Despite great interest in patient-reported outcomes measures as a way to improve care, there are few examples of real-life care systems that routinely collect and use such information. We will partner with a large medical group that is developing such a system in orthopaedics to evaluate it thoroughly. By working with clinical leaders, doctors, and patients, we will learn what outcomes are most important to patients and study the effect of providing this information to patients and their doctors on their satisfaction and on those outcomes.

Implementing Cancer Prevention Using Patient - Provider Clinical Decision Support (Elliott)

Source: NCI/R01CA193396

Role: Statistician

03/24/2016-02/28/2021

If primary and secondary prevention practices for breast, colorectal, and cervical cancer were improved, more than 100,000 cancer deaths a year could be delayed or averted in the United States and the burden of these diseases on quality of life reduced. In this project, we will adapt, implement, and evaluate a proven electronic health record-linked, Web-based, personalized clinical decision support system to identify patients needing primary and/or secondary cancer prevention care. The objectives of this project are to improve the quality and consistency of primary and secondary prevention of common cancers in rural areas by providing patient-centered and evidence-based treatment recommendations to both primary care provider teams and patients at the point of care and provide an efficient and effective model for implementation and dissemination of cancer prevention in rural settings.

A Clinic-Randomized Trial of a Clinical Decision Support System to Improve Dental Provider Delivery of Brief Tobacco Interventions and Quitline Referrals (Rindal)

Source: NIDCR/U01DE026135

Role: Co-Investigator/Statistician

07/01/2016-06/30/2020

This clinic-randomized trial will examine the rate at which dental providers deliver a smoking intervention and refer to a quitline when their EDR system includes health information technology-driven CDS compared with providers in control clinics without assistance from

the CDS. The primary outcome is a binary variable indicating whether the provider delivered a brief intervention or referral for treatment, as reported by the patient. By leveraging the dental encounter as an opportunity to deliver smoking cessation, we can further decrease smoking rates, leading to improved population health.

Home Blood Pressure Telemonitoring and Case Management to Control Hypertension (Margolis)

Source: NHLBI/R01HL090965

Role: Co-Investigator/Statistician

08/01/2013-04/30/2018

Uncontrolled hypertension causes many preventable strokes, heart disease, and kidney disease in Americans each year, so better control of hypertension is an important national health priority. Our NHLBI-funded randomized HyperLink intervention showed dramatic improvement in hypertension control using a simple and inexpensive strategy including home BP monitoring and periodic telephone contact with a pharmacist. In this project we will extend this important study to assess longer-term effectiveness and cost-effectiveness, and to assess opportunities for its broad use to improve the health of millions of Americans.

De-Implementing Opioid Use and Implementing Optimal Pain Management Following Dental Extractions (Rindal)

Source: NIDCR/ U01DE027441

Role: Co-Investigator/Statistician

09/01/2017-08/31/2021

The overarching goal of this project is to de-implement the reliance of opioid analgesics and to implement reliance on non-opioid analgesics to manage postoperative pain following dental extractions. We will compare different strategies to reduce the reliance on opioids and increase the use of alternative pain management approaches utilizing information support tools aimed at both providers and their dental extraction patients.

EHR-Based Clinical Decision Support to Improve BP Management in Adolescents (Kharbanda)

Source: NHLBI/R01HL115082

Role: Statistician

08/01/2012–07/31/2018

The goal of this project is to improve detection and management of elevated blood pressure in adolescents. It (a) uses electronic health record (EHR) technology to deliver patient-specific clinical decision support (CDS) to providers at the point of care, (b) assesses the impact of this intervention on identification and clinical care of hypertension in adolescents, and (c) assesses the impact of the intervention on costs of care. This project will be integrated with other ongoing and related research, primarily targeting adult populations.

Research Support Completed Within Past 3 Years

An Innovative Approach to Disseminate Dental Research (Rush)

Source: NIDCR/R01DE022332

Role: Statistician

03/15/2012-02/28/2017

This randomized trial provides dentists with simulated patients posing evidence-based challenges of effective treatment and build in treatment-specific decision support. We will assign HealthPartners dentists into a usual-care and simulation group and measure their treatment-planning patterns after the simulation group is exposed to evidence-based simulations and feedback support. We expect to find that the dentists exposed to the simulation encounters will exhibit practice patterns more congruent with successful patterns practiced in the simulation. While conducting this project, we will also plan the distribution of the simulation tool to the broader dental community.

Computer Assisted Tobacco Intervention for Dental Providers (Rindal)

Source: NIDCR/R34DE023895

Role: Statistician

09/01/2014-8/31/2016

Electronic dental records (EDRs) are a powerful tool to incorporate current scientific evidence into clinical practice by providing the right information at the right time to the right person in the right format that helps deliver optimal treatment. This planning grant will develop a group-randomized trial examining the degree to which dentists and dental hygienists in private practices and dental schools will assess patient interest in quitting and deliver a smoking intervention more often when given computer-assisted guidance compared with providers in a control group without such assistance, as measured by a survey of current smokers with a recent dental visit.

Measuring Patient Outcomes from High Tech Diagnostic Imaging Studies (Solberg)

Source: Patient-Centered Outcomes Research/No Award Number Provided

Role: Statistician

10/31/2012-06/30/2015

This study proposes to evaluate the use of patient surveys, health plan claims data, and medical records information to analyze the care process and outcomes experiences of patients after they have advanced imaging tests for abdominal or low back pain. The specific aims for the study are: 1) To identify the kinds of information that clinicians and patients who have had an advanced imaging test (CT or MRI scan) for abdominal or low back pain want and need to know regarding the care process and outcomes subsequent to such tests. 2) To identify and quantify that patient-centered information using these multiple data sources. 3) To determine where the information that patients and clinicians want and need is best obtained and to create a single tool or algorithm for future outcomes assessment work.

Analysis of Dental Practice Support Tools Addressing Smoking Cessation (Kottke)

Source: CDC/ 200-2009-28537

Role: Statistician

07/22/2013-07/21/2015

Despite the fact that tobacco is the leading cause of preventable death for Americans, efficacious clinical decision support tools to assist providers in the delivery of interventions are underutilized even in high performing HMOs. This study tests whether referral to a tobacco quit line by a dental care provider will increase utilization of the smoking cessation phone line as well as interest in quitting, quit attempts, duration of quit attempts among smokers. A clinical decision support tool embedded in the electronic dental record will prompt dental providers to ask patients about their smoking status and offer referral to the quit line when appropriate. Researchers will examine the fidelity of dental providers in providing the intervention by assessing the use of the clinical decision support tool and the extent of sustained provision of the brief referral intervention in order to inform future dental practice-based smoking cessation interventions.

Personalized Physician Learning Intervention to Improve Hypertension Control (O'Connor)

Source: NHLBI/NIH/DHHS/1R01HL08945101A1

Role: Statistician

6/1/2008-5/31/2012

In this project we assess the impact of two PPL interventions that differ in how they identify patterns of physician decision making in HT care. The first intervention, REAL-PPL, uses real EMR-derived data to direct the personalized learning intervention. The second intervention, SIM-PPL, uses physician performance on simulated cases to direct the personalized learning intervention.

Home Blood Pressure Telemonitoring and Case Management to Control Hypertension (Margolis)

Source: NHLBI/NIH/DHHS/1R01HL09096501A1

Role: Statistician

9/15/2008-6/30/2012

In this cluster-randomized trial we propose and test two simple yet powerful strategies that take advantage of new technology and team models of care to improve BP control in adults with hypertension.
